

POWERSHED[®]

SOLAR WING ASSEMBLY

Specifications

A 700W grid-tie solar array kit designed for rapid installation. Our proprietary self-sealing roof mounting system offers simple “click-in” installation which allows the array to be assembled on the ground and installed on the roof in one piece for a safer, easier and quicker setup over traditional installation methods. The electrical installation is completed by running a home run cable to the panelboard terminating at a 15 Amp, 120/240V circuit breaker. With its modular design, it is easy to expand your PV system by simply adding more assemblies. Up to four assemblies can be “daisy-chained” to one home run cable circuit.

ELECTRICAL

3 - 224 Watt UL1703 Solar Modules with racking system to mount on roof (expect an average generation of 2.5 kWh/day).

3 – 120/240VAC 60Hz UL1741 Micro-Inverters

Communication module with free web monitoring

LIMITED WARRANTY

Solar Modules = 25 years

Inverters = 15 years

DOCUMENTATION

Complete anchoring, assembly, and wiring details supplied for installation. Unlimited telephone support is available.

APPROXIMATE DIMENSIONS

10’L x 6’W x 6”H

Approximate weight 160 lbs

Ground Mount and Pole Mount options are available

*Exact specifications may change without notice depending on component availability
